
seal
audit
dispute
Inference worker encrypts the record (AEAD, fresh K_r)
Threshold KEM $C_1 = g^\rho$, wraps K_r under PK_E
Data-availability layer: ciphertext and receipt
commit
Policy contract and bulletin board (public clock)
audit evidence
Beacon, revealed after slot commit
Canary $X = H_G(\cdot)$; sample S, $|S| = s$
X to S
Custodian committee shares $x_1, \ldots, x_n$
X^{x_i} + DLEQ
Audit verifier: accept iff $\geq q$ valid responses
deadline and response record
to all n
$C_1^{x_i}$ + DLEQ
Authorized dispute: record, verifier set, deadline Δ_d
Release request for record's C_1
Combiner verifies t partials, computes $\prod_i (C_1^{x_i})^{\lambda_i}$
Unwrap K_r, decrypt, re-execute, issue verdict
